

Introduction

WebView (WV) plugins are versatile web-based services that integrate seamlessly across cTrader Mobile, Web, Windows and Mac apps, extending the platform UI and functionality.

WebView plugins in one minute!

- WV plugins support trading decisions and personalise your space by delivering useful services such as trading assistants, technical analysis widgets, symbol dashboards and more.
- Creators develop web apps hosted on external websites that interact with cTrader through a dedicated API.
- cTrader users can build WV plugins in cTrader Web, Windows or Mac and publish them directly in cTrader Store, reaching millions of traders. Optionally, they can add WV plugins only to their cTrader apps and share them via Invite, attributing other traders.
- Traders can effortlessly add WV plugins from cTrader Store, and they will be available across all their cTrader apps due to cloud synchronisation.

Explore WV plugins in [cTrader Store](#). Popular examples include:

- AI assistants
- Trade calculators
- Interactive dashboards
- Pattern recognition trainers
- Hashtag-based newsfeeds
- Technical analysis widgets
- Forex cross-rates tools
- Symbol notes
- And more

Mobile

Web and desktop

WebView plugins expand the cTrader ecosystem and differ from [desktop plugins](#) in several ways.

Aspect	WebView plugins	Desktop plugins
Solution	Web-based	Native
cTrader apps	Mobile, Web, Windows, Mac	Windows, Mac
Distribution method	cTrader Store, cTrader Invite	cTrader Store, cTrader Invite, files
